PROJECT INTRODUCTION

Construction work started in April on the Tudor Street Business Environment and Transport Scheme. The scheme will see the construction of a new two-way segregated cycle lane from Wood Street bridge to the junction with Clare Street, new bus stop facilities opposite Plantagenet Street, new rain gardens, tree pits and planted areas, wider footways and improved pedestrian crossing facilities.

The work forms part of a multi-million pound regeneration programme designed to create an attractive and vibrant shopping area for the local community and visitors to the Riverside area.

LATEST NEWS

We have completed a range of site investigation works, initial drainage work to the east, and installation of new underground cables on Tudor Lane. Works have also commenced to create a new ramp beneath the Railway Bridge on Taffs Mead Embankment.

We will shortly be starting more significant road and footway works, and to ensure these are completed in the safest and quickest manner we will be introducing a one-way system on Tudor Street from Monday 2nd August 2021.

This one-way system will be in place for approximately 11 months until all work is completed. Access to all businesses and homes will be maintained throughout the works.

On the following page we have provided diagrams detailing how traffic will move in and around Tudor Street and nearby areas. The work will be undertaken in various phases along Tudor Street, starting at the Clare Road and Tudor Street junction and moving along the street.

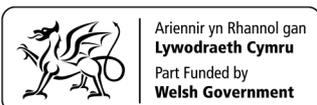

Traffic will only be able to travel westbound on Tudor Street from the city centre direction. The diversion route into the city will be via Despenser Street, onto Fitzhamon Embankment followed by a left turn onto Wood Street bridge.

We are working closely with bus operators to ensure that bus stop facilities are maintained in the area throughout the works.
